## Efficient Container Optimization

Cutting Costs, Saving Time, and Reducing Environmental Footprint

# Success Story

KWE India

## Efficient Container Optimization

Cutting Costs, Saving Time, and Reducing Environmental Footprint

# Client

Major Machinery Manufacturer

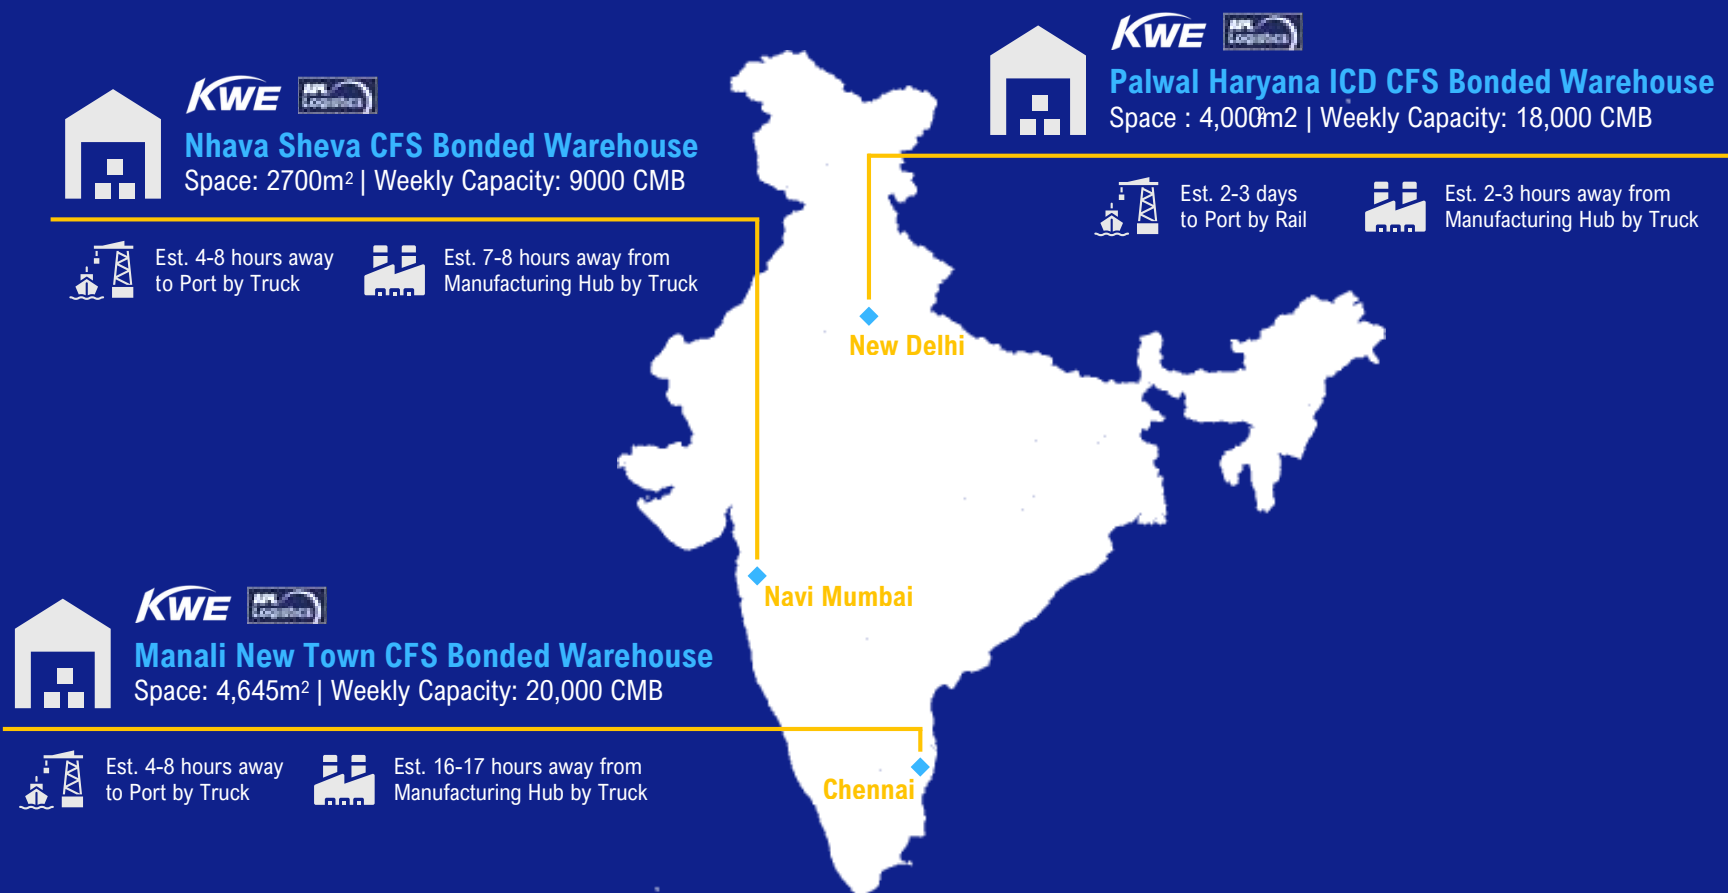

# Challenge

Poor container optimization, congested roads, and increased logistics costs due to a high number of shipments from multiple suppliers.

# Solution

KWE India's expert team skillfully coordinated pick-ups and consolidated shipments within a single container at our Inland Container Depots (ICD) and Container Freight Station (CFS) warehouses.

Our warehouses are strategically located near key manufacturing hubs in North, West and South India with proximity to major seaports.

Leveraging our extensive network, KWE combats road congestion en route to the port with the  rail transport, which is owned by our subsidiary company, APL Logistics. The entire journey is closely monitored, providing our clients with visibility into the process.

# Results

A win-win for the client and the environment:

Fewer containers used, reducing costs.

Faster transit times, eliminating multiple trips.

Reduced CO<sub>2</sub> emissions, contributing to sustainability.
